SunModo PV Rack Mounting System
UL2703 Compliant
Please read carefully before installing

Product is tested to and recognized to UL 2703 standards for safety grounding and bonding equipment and meets UL1703 fire standards.

SunModo PV Rack Mount System can be used to mount photovoltaic (PV) panels in a wide variety of locations. All installations shall be in accordance with NEC requirements in the USA. The self-grounding and bonding system is for use with PV modules that have a maximum series fuse rating of less than 30A. Mechanical design loads per UL 2703: Downward Pressure: 10 psf (478.8 Pa), Upward Pressure: 5 psf (239.4 Pa), Down-Slope: 5 psf (239.4 Pa). Mechanical test loads per IEC 61215: Maximum Downward Pressure: 50 psf (2394 Pa); Maximum Upward Pressure: 33 psf (1580 Pa), Maximum Down-Slope: 35 psf (1675 Pa).

Installer Responsibility

Before ordering and installing materials, all system layout dimensions should be confirmed by field measurements. SunModo reserves the right to alter, without notice, any details, proposals or plans. Any inquiries that you may have concerning installation of the PV system should be directed to your SunModo Sales representative. Consult SunModo Sales for any information not contained in this manual. This manual is intended to be used as a guide when installing SunModo EZ SunBeam Ground Mount systems. It is the responsibility of the installer to ensure the safe installation of this product as outline herein.

- Installer shall employ only SunModo products detail herein. The use of non SunModo components can void the warranty and cancel the letters of UL compliance.
- Installer shall guarantee that screws and anchors have adequate pullout strength and shear capacities.
- Installer shall adhere to the torque values specified in this Instruction Manual.
- Installer shall use anti-seize compound, such as Permatex anti-seize, lubricant is recommended for all threaded parts.
- Installer shall adhere to all relevant local or national building codes. This takes account of those that supplant this document’s requirements.
- Installer shall guarantee the safe placement of all electrical details of the PV array.
- Installer shall comply with all applicable local, state and national building codes, including periodic re-inspection of the installation for loose components, loose fasteners and any corrosion, such that if found, the affected components are to be immediately replaced.
- Installer to ensure the structural support members or footings for mounting the array can withstand all code loading conditions. Consult with licensed professional engineer for the appropriate loading conditions.
- Installer to follow all regional safety requirements during installation.
- This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instructions.

Safety

Review relevant OSHA and other safety standards before following these instructions. The installation of solar PV systems is a dangerous procedure and should be supervised by trained and experienced personnel.

It is not possible for SunModo to be aware of all the possible job site situations that could cause an unsafe condition to exist. The installer of the ground system is responsible for reading these instructions and determining the safest way to install the ground system. These instructions are provided only as a guide to show a knowledgeable, trained erector the correct part placement one to another. If following any of the installation steps would endanger a worker, the erector should stop work and decide upon a corrective action.
SunModo Self-grounding system

SunModo developed a proprietary grounding and bonding system that is built into the mounting hardware for the rails, clamps and splices. We provide further grounding through all of the SunBeam racking components including the Pipe Caps, Beams, Posts and Post Base Plates. All hardware meet UL 2703 Grounding and Fire Standards tested by ETL.

The basis of the system is our patented stainless steel floating grounding pin which is designed to be captive in the mounting components and provides a bonding path from the PV panel frames to the rails and rail splices, and finally to the ground lug. The self-grounding and bonding system is for use with PV modules that have a maximum series fuse rating of less than 30A. The maximum number of PV modules is limited by the system voltage, so in a system has multiple inverters, the SunModo racking system can theoretically go on forever.

Similarly, the rail splices the grounding pins, eliminating the need for extra bonding components.
EZ SunBeam Ground Mount System Components

Portrait End Clamp Kit, fits panel height from 31 to 50 mm. For last 3 digits, see table on last page.  
K10224-1XX

Grounding Mid Clamp Kit fits panel height from 31 to 50 mm.  
*May be repositioned until torqued to final value.*  
K10180-001  
For single-use only

Grounding End Clamp Kit with shared rail adaptor for standard rail; fits panel height from 31 to 50 mm. For last 3 digits, see table on last page.  
*May be repositioned until torqued to final value.*  
K10183-1XX  
For single-use only

Grounding Mid Clamp Kit with shared rail adaptor for standard rail; fits panel height from 31 to 50 mm.  
*May be repositioned until torqued to final value.*  
K10182-001  
For single-use only

Grounding Lug Kit with Grounding Spacer and 1/4-20 T-Bolt.  
*May be repositioned until torqued to final value.*  
K10179-001  
For single-use only

### 3/8” Slot Rail Splice Kit

- **Kit & Description:** 3/8” Slot Rail Splice Kit with (2) 3/8-16 hex bolts and flange nuts with integral grounding.
- **Part Number:** K10178-001
- **Description:** HR250/HR350 3/8” Splice
- **Details:** May be repositioned until torqued to final value.

### 1/4” Slot Rail Splice Kit

- **Kit & Description:** 1/4” Slot Rail Splice Kit with (4) 1/4-20 Bolts and Flange Nuts with integral grounding. May be repositioned until torqued to final value.
- **Part Number:** K10177-001, K10177-BK1
- **Description:** HR250/HR350 1/4” Splice
- **Details:** For single-use only

### 1/4” Slot Rail Splice Kit

- **Kit & Description:** 1/4” Slot Rail Splice Kit with (4) 1/4-20 Bolts and Flange Nuts with integral grounding. May be repositioned until torqued to final value.
- **Part Number:** K10236-001
- **Description:** HR150 1/4” Splice
- **Details:** For single-use only

### Pipe Cap Kit

- **Kit & Description:** Pipe Cap Kit, includes setscrews, 4X 3/8-16 T-Bolts and Flange Nuts, Grounding Washer and other hardware.
- **Part Number:** K10218-001, K10223-001
- **Description:** 2.0” AL Sch. 10 Pipe, 2.5” AL Sch. 10 Pipe

### Post Base Plate Kits

- **Kit & Description:** Post Base Plate Kits for 2.0” and 2.5” AL Schedule 10 Pipes.
- **Part Number:** K10200-001, K10200-002
- **Description:** 2.0” AL Sch. 10 Pipe, 2.5” AL Sch. 10 Pipe
Steel Post Base Kits for 2.375” OD and 2.875” OD tubing includes 3X 3/8-16 X 3/4” Flange Bolts.

- K10237-001 2.375” OD Steel Post Kit
- K10237-002 2.875” OD Steel Post Kit

SunBeam Post Clamp Kit available in 2.0” and 2.5” with hardware included.

- K10219-001 2.0” AL Sch.10 Pipe
- K10222-001 2.5” AL Sch.10 Pipe

Side Mount Pipe Cap Kit includes 3/8-16 T-Bolt, Flange Nuts and 4X M10 Set Screws.

- K10184-001 2.0” AL Sch. 10 Pipe
- K10184-002 2.5” AL Sch. 10 Pipe

Helical Earth Anchors with 10” blade available in 63” and 84” lengths.

- A20194-063
- A20194-084

Ground Screw Anchors available in 63” and 84” lengths.

- A20195-063
- A20195-084

Tools Required for Installation

Electric Drill or impact driver.
*Note that the use of an impact driver is strongly discouraged for all stainless nut and bolt hardware.*

3/8" Socket wrench

Sockets for 3/8" drive sockets, 7/16", 1/2", 9/16" and 1-1/16"

Torque Wrench 3/8" drive, 0 to 35 ft. lbs.

Anti-seize compound (Permatex 80071 or equivalent).
Tape measure

Saws for cutting aluminum posts and rails as necessary
Torque Values for EZ SunBeam Components

These maximum torque values must be adhered to, both for mechanical strength and to insure the performance of the integral grounding and bonding features. It is recommended that anti-seize compound be applied to the screw threads and a torque wrench be used to measure the bolt torque during final assembly.

The EZ SunBeam Ground Mount system can be integrated with steel support for a scalable and simple ground mounted solution. Our unique drive-in earth anchors represent one of three choices for Ground Mounted Solar Arrays. Angles from 10° to 50° can easily be accommodated with the SunBeam racking system components. Portrait and landscape oriented PV panels are easy to configure.
Post Ground Mount

The EZ SunBeam Concrete and Post mount showing typical configuration and dimensions with PV panels mounted at 20 degrees as viewed from the East.

Ballasted Ground Mount

The EZ SunBeam Ballasted concrete form mount showing typical configuration and dimensions with PV panels mounted at 20 degrees as viewed from the East.

Auger Ground Mount

The EZ SunBeam Earth Auger system showing typical configuration and dimensions with PV panels mounted at 20 degrees as viewed from the East.
Installation Instructions:

Post Base Plate to Precast Concrete Block

There are many ways to attach structural members and fixtures to concrete, and the choice of anchoring system depends on a variety of factors. A Structural Engineer should specify the type of concrete fastener to be used.

For new construction consult SunModo before starting your project.

Drill the holes in the concrete and follow the manufacturer’s recommendation on the installation and torque to be used with a particular fastener type.

This cross section shows the mounting of a Post Base Plate to a precast concrete block.

Insert the Post onto the Post Base Plate and secure with the installation of a 1/2" Bolt and Flange Nut as shown. Torque to 15 ft. lbs.

To bond the Post to the Post Base, install a #12 X 3/4” Self-Drilling Screw in any position diagonally located relative to the Post Base at 1” above the base flange. Torque to 6 ft. lbs.
Helical Earth and Ground Screw Anchors Installation

Determine the anchor locations per SunModo layout drawing. Build two pairs of batter boards to hold the mason’s lines: one pair for the front posts and other for the rear posts.

Make sure the top ends of the front or rear Anchors are at the same height (within 1” high difference).

Install the front/rear Post to the Anchors as shown and secure using M16 Bolts and Flange Nuts. Torque to 300 ft. lbs.

Pipe Cap to Post Attachment

Position the Pipe Cap on top of the Post and secure using the Allen Screws provided.

The Pipe Cap can be moved up and down approximately 2” to allow for leveling of the Pipe Cap relative to the SunBeam. Torqued to 10 ft. lbs. with a 5mm Allen head drive.

SunBeam to Pipe Cap Attachment

Insert the supplied 3/8” T-Bolts into the rail slots of the SunBeam and through the slots of the Pipe Cap. Secure using 3/8” Flange Nuts. Torque to 15 ft. lbs.
### Angle Mount to SunBeam Attachment

Attach the Angle Mount to the top of the SunBeam in orientation shown. Use the two supplied 3/8" T-Bolts and Flange Nuts to secure. Torque to 15 ft. lbs.

---

### Angle Mount to Rail Attachment

Attach the Angle Mount to the Rail using two 3/8" T-Bolts and Flange Nuts. Locate the T-Bolts in the lowest position in the Angle Mount slots. Once the proper angle for the Rail is set, the Flange Nuts can be tightened. Torque to 15 ft. lbs.
Brace to Pipe Cap Attachment

Where bracing is required, the Brace can be installed onto the Post Cap on one end as shown.

A single 3/8-16 X 3-1/2” Hex Bolt and Flange Nut are required. The Star Washer supplied with the kit must be installed under the head of the bolt as shown. Torque to 15 ft. lbs.

Attach the other end of the Brace to the Post using a Post Clamp.

Pipe Clamp to Post Attachment

Where bracing is required to a post, a sliding Pipe Clamp is installed as shown. The sliding Pipe Clamp is secured with a 3/8-16 X 2” Hex Bolt and Flange Nut. Torque to 15 ft. lbs.

Install the two Grounding Setscrews in the Pipe Clamp as shown. Using a 5mm hex driver torque to 10 ft. lbs.

The Brace can now be attached to the Post and Pipe Clamp.

Pipe Clamp to Brace Attachment

Where bracing is required to a post, the Brace can be installed onto the Pipe Clamp attached to the Post as shown.

A single 3/8-16 X 3-1/2” Hex Bolt and Flange Nut are required. The Star Washer supplied with the kit must be installed under the head of the bolt as shown. Torque to 15 ft. lbs.
L-Foot to SunBeam Attachment

Diagonal bracing can be installed between a vertical Post and the SunBeam using an L-Foot. Mount the L-Foot to the bottom of the SunBeam using a 3/8” T-Bolt and Flange Nut. Torque to 15 ft. lbs.

L-Foot to Brace Attachment

Where bracing is required to a SunBeam, the Brace can be attached to an L-Foot as shown. A single 3/8-16 X 3-1/2” Hex Bolt and Flange Nut are required. The Star Washer supplied with the kit must be installed under the head of the bolt as shown. Torque to 15 ft. lbs.
Splice to SunBeam Attachment

Where a splice is required for the SunBeam, the splice should be inserted before the SunBeam is fastened in place.

Slide the SunBeam Splice onto the end of the SunBeam as shown.

Attach the SunBeam Splice using two supplied 3/8” T-Bolts and Flange Nuts. Torque to 15 ft. lbs.

SunBeam to SunBeam Attachment

Complete the splice by sliding the SunBeam into the SunBeam Splice as shown.

Attach the SunBeam Splice using two supplied 3/8” T-Bolts and Flange Nuts. Torque to 15 ft. lbs.

Rack Leveling

At this time during the installation, the spacing and leveling of the rack should be checked and adjusted as necessary.
PV Panel Portrait Mounting

PV Panel Overhang

For PV panels installed in the Portrait orientation the panels can extend beyond the SunBeam a maximum of 25% of the panel length.

For a SunBeam system the SunBeam can extend beyond the Post a maximum of 25% of the SunBeam length.
## Clamp Installation – Portrait Orientation

Proceed with the mounting of the PV panels using the mid and end clamps. Specific mounting instructions are shown in the following sections for Portrait and Landscape mounting.

- **Installing Mid Clamps**: A mid clamp is used between PV panels. It will produce 1/2” spacing between PV panel frames.
- **An End Clamp is used to secure PV panels at the ends of a row.**

## End Clamp Installation

There must be a minimum of 1.5 inches of Rail extending beyond the PV panel frame.

- Clamp the PV panel frame by inserting the T-Bolt into the Rail slot. Position the End Clamp firmly against the PV panel frame and secure using the 1/4-20 Collar Bolt. Using a 7/16” socket, torque to 7.5 ft. lbs.
- **Note**: When two or more PV panels are installed grounding via the End Clamp is optional. For a single panel configuration (shown), insert the T-Bolt into a T-Bolt Holder for grounding the panel to the Rails.

## Mid Clamp Attachment

- Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot. Insert Grounding T-Bolt Holder to lock T-Bolt in place.
- Thread the 1/4-20 Collar Bolt onto the top of the T-Bolt as shown. After positioning the Mid Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.
Clamp Installation – Landscape Orientation

Proceed with the mounting of the PV panels using the mid and end clamps. Specific mounting instructions are shown in the following sections for Portrait and Landscape mounting.

Installing Mid Clamps: A mid clamp is used between PV panels. It will produce 1/2” spacing between PV panel frames.

An End Clamp is used to secure PV panels at the ends of a row.

**Landscape End Clamp Installation**

End Clamps are used at the ends of a row of PV panels.

Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot. Insert Grounding T-Bolt Holder to lock T-Bolt in place.

Thread the 1/4” Collar Bolt onto the top of the T-Bolt as shown. After positioning the End Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.

**Mid Clamp Installation**

Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot. Insert Grounding T-Bolt Holder to lock T-Bolt in place.

Thread the 1/4” Collar Bolt onto the top of the T-Bolt as shown. After positioning the Mid Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.
Ground Wire Attachment

The picture shows a grounding lug mounted on both Rails at the end of each row and a #6 solid copper grounding wire connecting the Ground Lugs to the building ground per NEC 690.47.

Ground Lug Installation

At the end of each row both Rails should have a Ground Lug for fastening the ground conductor to the array. The Ground Lug is mounted on the top or side of the Rail using a special 1/4" T-Bolt, Grounding Spacer, and Flange Nut. Grounding Lugs K10179-001, and detailed installation document D10003 are available from SunModo separately.

Rail End Covers

Rail End Covers can be attached to the mounting rails as shown. Rail End Covers are also available for the SunBeam Rail not shown.
